SUMMARY

SOC-focused Cybersecurity M.S. graduate with CompTIA Security+ certification, a B.S. in Computer Science, prior Secret clearance, and hands-on experience in security monitoring, alert analysis, and log review. Experienced in analyzing network and host-based events using tools such as Wazuh, Snort, Wireshark, and Nmap to distinguish benign activity from security-relevant behavior. Regularly leverages AI tools to support technical research, troubleshooting, and cybersecurity learning. U.S. Navy veteran bringing disciplined execution, incident readiness, and a strong commitment to expanding SOC-relevant skills and threat analysis techniques.

EDUCATION

University of San Diego | Shiley-Marcos School of Engineering | San Diego, CA
Master of Science in Cybersecurity Engineering, May 2026
Bachelor of Science in Computer Science, May 2025

CERTIFICATIONS

CompTIA Security+
CompTIA CySA+

TECHNICAL PROFICIENCIES

- **Security Monitoring and Detection:** Wazuh SIEM, Snort IDS, Wireshark, PCAP analysis
- **Vulnerability Assessment:** Tenable Nessus, OpenVAS, Lynis, CVE and CVSS analysis
- **Networking and Reconnaissance:** Nmap, TCP and UDP analysis
- **Scripting & Automation:** Python, Bash, Powershell
- **Operating Systems:** MacOS, Linux (Ubuntu, Kali), Windows
- **Platforms and Tooling:** Docker, Git, Github
- **AI Assisted Analysis:** Use of AI tools to support log analysis, troubleshooting, scripting, and security research tasks

CYBERSECURITY ACADEMIC PROJECTS

Wazuh Host Monitoring and Alert Analysis Project | Summer 2025

- Deployed Wazuh agents and manager to monitor host activity and system logs across multiple systems.
- Generated and analyzed Wazuh alerts for VPN connection activity by triggering authentication and connection events using a VPN profile.
- Documented and reviewed log data to distinguish benign events from security-relevant activity.

Snort Intrusion Detection and Alert Analysis Sandbox Lab | Fall 2025

- Deployed Snort to monitor network traffic in a controlled lab environment.
- Modified and tuned Snort detection rules to identify reconnaissance scans and exploit related activity.
- Generated and analyzed alerts resulting from scan and exploitation attempts against a vulnerable target
- Validated alerts using PCAP analysis in Wireshark.

Vulnerability Assessment and Risk Analysis Project | Spring 2026

- Conducted authenticated and unauthenticated vulnerability scans using Tenable Nessus and OpenVAS across four cloud-based virtual machines
- Assessed security posture of a Windows Server 2022 domain controller, Windows Server 2022 file server, Ubuntu workstation, and CentOS system
- Identified vulnerable services, outdated software, and configuration weaknesses across Windows and Linux hosts

- Analyzed associated CVEs and CVSS severity to prioritize risk and distinguish actionable findings from false positives
- Validated remediation efforts through targeted rescans and result review

RMF Automation and Security Dashboard Project | Spring 2025

- Deployed and configured OpenRMF to automate security control tracking and compliance assessments in an air gapped environment.
- Integrated automated auditing and configuration checks to provide centralized visibility into system security status.
- Used Ansible and Terraform to support repeatable infrastructure provisioning and security assessment workflows.

Lynis Research Project | Fall 2024

- Conducted system level security audits using Lynis to assess configuration weaknesses and baseline security posture.
- Reviewed audit findings to identify misconfigurations and potential attack surface exposure.
- Produced actionable hardening recommendations aligned with audit results and security best practices.
- Validated improvements through follow up scans and configuration review

PROFESSIONAL EXPERIENCE

U.S. Navy – Electrician's Mate (CVN 70) | San Diego, CA | July 2014 – July 2019

- Performed systematic troubleshooting and diagnostics on mission critical systems in high pressure operational environments.
- Followed strict technical procedures and documentation standards to ensure system integrity and operational readiness.
- Identified abnormal system behavior and escalated issues according to established response protocols.
- Maintained a security aware mindset aligned with risk mitigation and operational safety requirements.
- Mentored junior personnel on procedural discipline and technical best practices.

AFFILIATIONS

- **Student Veteran Organization (SVO), Secretary** | University of San Diego | Fall 2024 - Spring 2025
- **STEM Outreach Organization** | University of San Diego | Fall 2022 - Spring 2023
